

Keeping your children safe online with TrustElevate

RegTech for Data Handling

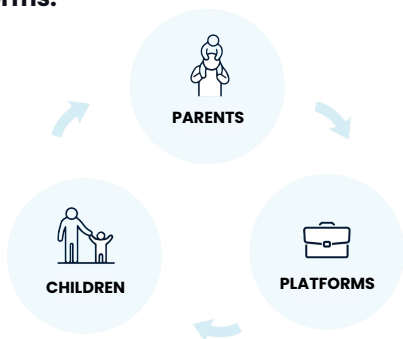

A minimum of
300,000
individuals in the UK pose a sexual threat to children

Online child sex abuse spiked by
31%
in 2020

TrustElevate is a child age verification and parental consent as a service provider that enables a safer internet for students.

We enable digital platforms that handle students' data to do so in compliance with regulations so they can serve age-appropriate content, limit sexual contact between children and adults and respect children's rights in digital environments.

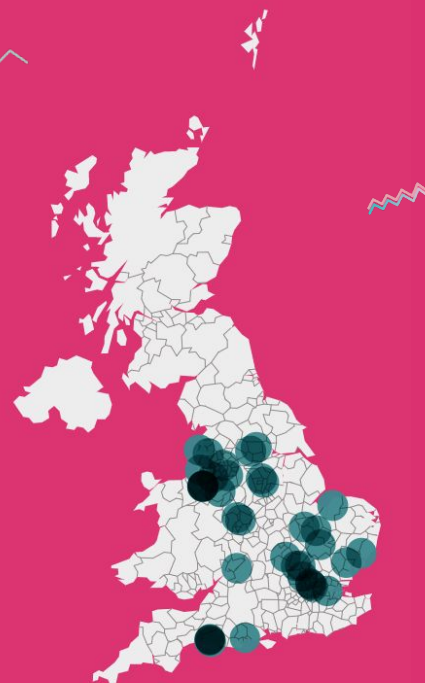

We have created a technology that creates a simple and reliable three-way relationship between children, parents and platforms. **We do not hold or share any personal data with the platforms.**

#StrongerTogetherOnline 18 organisations · 61 schools · 40,763 students

We are inviting schools to participate in the beta launch. It involves minimal resources from the schools and there is **no charge** to schools or parents.

By registering your interest to get your or your child's school involved, you'll be joining a fantastic group of schools from around the country who are showing their commitment to making the internet a safe place for children. If you are interested, please email us at info@trustelevate.com.

TrustElevate's founder, **Dr Rachel O'Connell**, is a leading expert on digital safeguarding. Her PhD examined paedophile activity online and the implications for investigative strategies. She is a Technical Advisor to the UK Government, Google, US FTC, GCHQ, Australian Government, Irish Government, EU Commission, WHO and Unicef.

Dr O'Connell set up the first UK Internet Safety Centre in 2000 and was the Chief Security office for Bebo, a social networking platform, from 2006–2010. In founding TrustElevate, her aim was to continue in her efforts to better safeguard children online.
